Pesticide Spills: Planning and Preparedness

A pesticide spill refers to any unplanned spill or leakage into the environment that occurs during storage, use, transport, or disposal of a pesticide. Risk of a spill increases with the size of the operation and the number of persons involved in pesticide handling.

Being prepared to respond is crucial...

Glove Selection

Properly protecting yourself when using pesticides can decrease the risk a pesticide has on your health and safety. Handling pesticides can include mixing, loading, or applying pesticides, all of which could expose your hands to chemicals. Using the right gloves is essential, since the highest percentage of pesticide exposure occurs through the skin...

Protecting Bees and Other Pollinators

Many types of plants, including fruit and vegetable crops, depend on animals for pollination. In addition to honey bees, many other types of animals pollinate crops and wildflowers.

We are concerned about declines in pollinator health and are working to protect bees and other pollinators from pesticide risks...
